

REPLACEMENT PAGES OF AMENDED CLAIMS 1, 6 AND 8

1. A computer telephony server for interfacing a plurality of computer telephony applications programs to one or more of a plurality of telephony environments, the plurality of environments being accessible to the computer telephony server, said computer telephony server comprising:

means for communicating, using a common standardized message structure set, with at least one computer telephony application, said application including means for selecting one of said plurality of environments to communicate over ;

a translation layer for translating messages from the standardized message structure set to the message structure set of at least said selected one environment selected by said application; and

means for automatically configuring said server to select said message structure set of said selected one upon receipt of a selection message of said one environment from said application.

6. A call processing system comprising:

a personal computer, said personal computer including means for receiving an account number or other identifying information associated with a user's account, means for performing a table lookup to ascertain a full record of information regarding the users account, and means for displaying such information on a computer screen, said personal computer further including means for selecting one of a plurality of telephony environments to communicate over;
